Each square centimeter contains 4 µg (0.00916 µmol) flurandrenolide, a potent corticosteroid for topical use. Cordran Tape (Flurandrenolide Tape, USP) is a transparent, inconspicuous, plastic surgical tape, impervious to moisture. It contains Cordran (Flurandrenolide, USP), a potent corticosteroid for topical use. Use of Cordran Tape is not recommended for lesions exuding serum or in intertriginous areas. Use of Cordran Tape is not recommended for lesions exuding serum or in intertriginous areas.

**CONTRAINDICATIONS**

Cordran is primarily effective because of its anti-inflammatory, antipruritic, and vasoconstrictive actions and has been extensively studied in clinical trials. The following tests may be helpful in evaluating the HPA axis suppression:

**Pharmacology**

Corticosteroids may be absorbed through intact skin, but absorption is proportionately greater through the skin of the flexor areas, axilla, perianal and pubic regions, and the dorsal aspect of the hands and feet. The extent of percutaneous absorption through intact skin is influenced by the vehicle, the rate of application, and the length of exposure. The skin is protected from scratching, rubbing, desiccation, and chemical irritation by the tape. The tape acts as a mechanical splint to fissured skin. Since it prevents removal of the medication by washing or the rubbing action of clothing, the tape formulation can be applied only once before application.

1. This medication is to be used as directed by the physician. It is for external use only. Avoid contact with the eyes.

2. Patients should be advised not to use this medication for any disorder other than that for which it was prescribed.

For the Physician

### PRECAUTIONS

Corticosteroids should be discontinued and appropriate therapy offered. This medication should be used under occlusive dressing. Conditions that augment systemic absorption include application of the more potent corticosteroid, use of occlusive dressings, and patients with impaired hepatic, renal, or adrenal function. The importance of this suppression should be explained to the patient and the importance of complete discontinuation of the medication noted. Topical corticosteroids should be discontinued and appropriate therapy offered.

### INDICATIONS AND USAGE

For relief of the inflammatory and pruritic manifestations of corticosteroid-responsive dermatoses, based on clinical evidence and comparison to less efficacious corticosteroids. Topical corticosteroids are contraindicated in patients with a history of sensitivity to any of the components of these preparations. Topical corticosteroids are contraindicated in patients with a history of sensitivity to any of the components of these preparations.
ADVERSE REACTIONS

The following local adverse reactions are reported infrequently with topical corticosteroids, but may occur more frequently with occlusive dressings:

Skin: 
- Miliaria
- Striae
- Skin atrophy
- Secondary infection
- Maceration of the skin
- Allergic contact dermatitis
- Perioral dermatitis
- Hypopigmentation
- Acneform eruptions
- Hypertrichosis
- Folliculitis
- Dryness
- Irritation
- Burning
- Pruritus
- Papules
- Erythema

Adverse reactions reported with the use of occlusive dressings include:

-出栋天贸
-出栋天贸
-出栋天贸
-出栋天贸
-出栋天贸
-出栋天贸
-出栋天贸
-出栋天贸
-出栋天贸

The following may occur more frequently with occlusive dressings:

- Maceration of the skin
- Skin irritation
- Skin rash

OVERDOSAGE

Occlusive dressings may be used for the management of atopic dermatitis, but it is not recommended for use in severe cases of dermatitis unless under medical supervision.

In an ill-developed child, the use of Cordran Tape and other occlusive dressings should be discontinued and appropriate therapy instituted.

Replacement of the tape every 12 hours produces the lowest incidence of adverse reactions, but it may be left in place only if it is well tolerated during the treatment period.

If an infection develops, the use of Cordran Tape and other occlusive dressings should be discontinued and appropriate antimicrobial therapy instituted.

The directions given below are included in a separate package insert for the use of the occlusive dressings.

APPLICATION OF CORDAN TAPE

DIRECTIONS FOR USE:

1. Prepare skin as directed by your physician or as follows: Gently clean the skin and allow it to dry for 1 hour before applying new tape. The skin should be clean and comfortable at the time of application. If shower or tub bath is to be taken, it should be completed before the tape is applied. The skin should be dry before tape is applied. Tape should always be cut, never torn.

2. Remove film from package and cut a strip slightly larger than area to be covered. Round off corners. If necessary, trim length to fit treated area. Place the strip on the skin and smooth the tape firmly but gently. Press tape into place.

3. Pull white paper from transparent tape. Be careful that tape does not stick to skin and adhere. If hair interferes with the adhesive, trim the hair in the treatment area to allow both good contact with the skin and easy removal of the tape.

4. Apply tape, keeping skin smooth; press tape into place.

5. Replace the tape every 12 hours. The tape may be left on only if it is well tolerated and removed during the day.

6. If the ends of the tape are loose, they may be trimmed off and replaced with new tape.

If irritation develops, the use of Cordran Tape and other occlusive dressings should be discontinued and appropriate antimicrobial therapy instituted.

The directions given below are included in a separate package insert for the use of the occlusive dressings.

IMPORTANT: Skin should be clean and dry before tape is applied. Tape should always be cut, never torn.

HOW SUPPLIED

Rx only

NDC 52544-044-80
4 mcg/sq cm—large roll, 80 in x 3 in (200 cm x 7.5 cm)

NDC 52544-044-24
4 mcg/sq cm—medium roll, 30 in x 3 in (75 cm x 7.5 cm)

NDC 52544-045-24
4 mcg/sq cm—small roll, 24 in x 3 in (60 cm x 7.5 cm)
